## ADVANCE NOTICE

HERE IT IS AT LAST! A ONE HUNDRED POUND Square Stern Speed Canoe built especially for Out-Board Motors. The latest model added to the popular line of ARROWHEAD CANOES. A light, swift and safe achievement designed and built to meet the demand we have anticipated.

Never before has a canoe of this type, with such beautiful lines, weight and strength been presented to the public.

The safety of this canoe should appeal to all lovers of boating. The sponsons are so skillfully designed and built into the outside bilge that they are not noticeable and an added grace to the canoe tumble-home has been artistically brought out. The air space is much greater than the old style, unsightly, sponsons and the construction trusses and strengthens the sides to such extent that all motor vibration is eliminated.

The V bottom bow, tapering to near flat at stern with 2 1-2-inch rake and deep keel, scientifically constructed, gives the speed and stability required.

THINK OF IT! A boat with a capacity for six to seven persons that can be easily carried by two people and racked when not in use.

Our 1925 Catalog showing the full line of ARROWHEAD CANOES, with much valuable information and rules for canoing, and liberal discounts to dealers, will soon be ready for distribution. We will gladly send one on request.

Yours very truly,

ST. LOUIS-MERAMEC CANOE COMPANY,

Valley Park, (ST. LOUIS COUNTY) Mo.

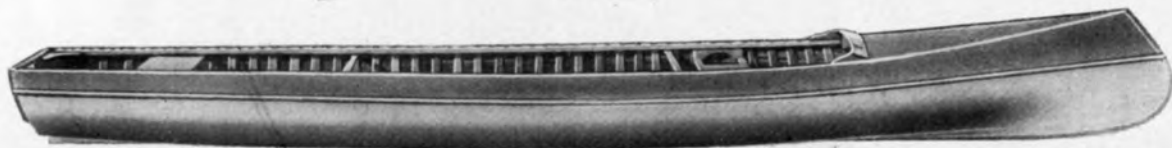

Bow view showing V bottom, graceful lines and sponson construction.

(Note width carried well forward)

Trial test on the Meramec, developing a speed of 12 miles per hour.
